                                                                      9:04 AM

to Janet, Douglas, Ethel

Yes, we would want a badge control station computer.   Ideally, we also want the
control computer also. I'm against any "cloud solution" because If either our internet at
the new library goes out, or the SBPG complex internet computer goes out, we would
NOT have access to the meeting rooms, unless there were metal keys made as
backup.

How many systems does the SBPG want to control in this building?   I can understand
them wanting to monitor the burglar alarm and fire alarm systems to notify the parish
police and fire department.   Are these systems going to be controlled and connected
DIRECTLY to these two departments instead of a 3rd party monitoring company?

Does SBPG want access to our security cameras?   Our lighting system to turn on/off
lights remotely?   Our HVAC system to set our temperature?   Please tell us how many
other systems they want to control.

Is there a reason why the SBPG wants to see inside our building instead of just the
parking lot?
