Response to RFI #95 – FAX Electrical Outlet and Data heights
07/26/2024

Ideally, the bottom of both the electrical outlet box and the phone/Ethernet box should be 2 inches above counter height to guard against water and beverage spills.

There is no millwork plan for the FAX outlet shelf listed in the architect's plans. Using the circulation desk millwork as a guide, the outlets at both at the circulation desk and the FAX counter should be 34" AFF.
