I know Ms. Ethel mentioned it yesterday after the meeting, but the alarm keypad needs to be moved from the threshold area to a safer area inside the staff area.

This is because this is a UPS/FedEx/USPS delivery drop off room and people will be transporting large items through the doorway (remember the "Pallet of paper"?). In its current location, a lazy person will knock the keypad off the wall with their pallet jack or hand truck.. This was mentioned to the architects back in the 4/2/2022 staff document but was ignored.

For the same reason, we probably should have metal corner protectors in this delivery room also to protect the walls.
