

Pacifica (???????) if we have to choose between the two sent, but we would prefer a choice that definitely shows a definite BLUE color visible to the public. The two samples are very DARK and with the dark bricks, we have a black, somber-looking library.

This is what I plan on sending to the architect. Take a look at it and let me know if I've captured the questions you mentioned in our call last night.

The library board met last night and reviewed the 2 choices for glazing provided by Gibbs.

The following questions were asked of me to get answers to.

1. The original sample set included a frosted sample. Is there a frosted version of the samples provided?
2. The two samples provided according to the board appear to be much darker than the original sample. Is there a lighter blue version? While reviewing the samples the rendering was used as a comparison.

The preferred glazing color of the two samples provided is the ??????????, but the questions need to be answered before final direction from the Library board is given.

Respectfully,

Douglas D. Landry

Doug, I said I did not understand this email. You said you would investigate other "bluer" options. I assume you are telling me there is no other option, and Pacifica is IT. Please clarify for me.

Ethel,

Any progress on the boards answer pertaining to the glass selection final decision?

Ethel,

The architect and contractor responded to the boards request pertaining to the frosted samples and lighter color blue. See below. We will need to get the final answer from the board quickly as to not delay the project. Can you assist ? If not, let me know.

FYI - The Pacifica color although slightly darker will provide for less light transmission and has the potential result of reducing energy cost and improved efficiency.

Doug, see below from Jacob.

Kurt,

The samples that were provided are the closest in color that is available.

The frosted samples are currently being shipped to the jobsite.

Thanks,
